[Based on Drawing ASK_0139_Site_With Survey Underlay from ZGF dated 2020-10-14]
[Issued for Discussion; not for Construction]

Exhibit 5.1 Recommended Sight Distances at Taylor Way Access

Bunt undertook a field review of the Har El access to confirm that the available site distance for drivers exiting to Taylor Way southbound met the TAC guidelines based on design speed. **Figure 5.1** shows the observed conditions. The vehicle seen turning from the Highway 1 eastbound off-ramp to Taylor Way southbound (circled in red) is located approximately at the end of the clear site triangle for intersection site distance, confirming that this guideline is met. Although there would be additional foliage during the summer and spring, it does not appear that this would block the clear site triangle.

Figure 5.1 Field Review of Intersection Site Distance at Har El Driveway

6. CONCLUSIONS & RECOMMENDATIONS

- With the planned re-development of the Inglewood Care Centre site, an additional 33 peak hour vehicle trips are anticipated at the Taylor Way site access during the AM peak period, and 46 vehicle trips during the PM peak period;
- No capacity, queueing, or delay issues are anticipated as a result of the additional traffic using the Taylor Way access;
- The existing site access locations meets the TAC guidelines for Stopping Site Distance and Intersection Site Distance.
- Given these findings, the use of this existing access by the Inglewood Care Centre redevelopment is supportable.

APPENDIX D

Trip Generation and Background Traffic Growth Rates

MEMO

DATE: September 2, 2020
PROJECT NO: 04-20-0028
PROJECT: **Inglewood Care Centre**
SUBJECT: **Proposed Trip Generation and Background Traffic Growth Rates**

TO: Kattia Woloshyniuk
 BC Ministry of Transportation and Infrastructure

PREPARED BY: Matt Taylor, P. Eng., M. Eng., PTOE

1. INTRODUCTION

Baptist Housing has recently acquired the Inglewood Care Centre at 725 Inglewood Avenue in the District of West Vancouver. The site is located at the corner of Inglewood Avenue & Taylor Way, and extends west to Burley Drive, as shown **Exhibit 1.1**. The 235 bed seniors' care facility has been in operation for nearly 60 years and Baptist Housing is now proposing a comprehensive redevelopment of the entire site to feature the following located in several new buildings. **Exhibit 1.2** illustrates the proposed site plan. The size of the proposed development in terms of both floor area and the number of beds and units is summarized in **Table 1.1**.

Table 1.1: Proposed Development

FACILITY TYPE	BEDS / UNITS
Long Term Care	253 beds
Assisted Living	96 beds
Independent Living / Life Lease	195 units
Affordable Seniors Rental Housing	50 units
Team Members & Workforce Housing	105 units
TOTAL	349 BEDS & 350 UNITS

The purpose of this memo is to:

- Recommend vehicle trip generation rates for the proposed development (see **Section 2**); and,
- Recommend background traffic growth rates for the study area road network (see **Section 3**)

2. TRIP GENERATION RATES

For the land uses on site, there are several comparable land uses with trip generation rates in the ITE Trip Generation Database. The purpose of this section is to establish reasonable trip generation rates for the component of the proposed development based on the available data.

Table 2.1 summarizes the trip rates from the Institute of Transportation Engineers (ITE) Trip Generation Database related to the Assisted Living and Long-Term Care components of the proposed development. These land uses have few supporting data points, but are within a comparable range of trip rates. These are combined into a single trip rate by calculating weighted average based on the number of studies.

Table 2.1: Assisted Living / Long Term Care Vehicle Trip Rates

NAME	LAND USE CODE	SETTING	UNITS	DATA POINTS	AM PEAK HOUR			PM PEAK HOUR		
					IN	OUT	TOTAL	IN	OUT	TOTAL
Assisted Living	254	General Urban / Suburban	Beds	9	0.12	0.07	0.19	0.10	0.16	0.26
Nursing Home	620	General Urban / Suburban	Beds	3	0.12	0.05	0.17	0.07	0.15	0.22
WEIGHTED AVERAGE			BEDS		0.12	0.07	0.19	0.09	0.16	0.25

The existing Inglewood Care Centre facility provides comparable assisted living type services and has 235 beds. A PM peak hour spot count was conducted at the existing facility, and rate of approximately 0.20 vehicle trips per bed was observed. This is comparable, although slightly lower than the rates found in the ITE Database.

Table 2.2 summarizes the comparable ITE trip rates for the Independent Living / Life Lease and Affordable Seniors Rental Housing components of the proposed development. Although there is an ITE Affordable Housing for Seniors land use category, only a single data point is available, and it is during the AM peak period. Given this, the “Senior Adult Housing - Attached” land use category is proposed as a substitute.

Table 2.2: Independent Living / Seniors Housing Vehicle Trip Rates

NAME	LAND USE CODE	SETTING	UNITS	DATA POINTS	AM PEAK HOUR			PM PEAK HOUR		
					IN	OUT	TOTAL	IN	OUT	TOTAL
Senior Adult Housing - Attached	252	General Urban / Suburban	Units	11	0.07	0.13	0.20	0.14	0.12	0.26

The proposed development also includes Team Members & Workforce Housing, for which the ITE Trip Generation Database does not have a comparable land use. Mid-rise multi-use housing in a dense multi-use urban setting is proposed as a substitute, as this would be representative of a site where fewer people drove to and from work than in a general urban/suburban setting. This is a highly conservative assumption for this site given that nobody living and working on the same site, as is the case here, would drive to work. **Table 2.3** summarizes the ITE Trip Generation rates for this land use category.

Table 2.3: Multifamily Housing (Mid-Rise) Housing Vehicle Trip Rates

NAME	LAND USE CODE	SETTING	UNITS	DATA POINTS	AM PEAK HOUR			PM PEAK HOUR		
					IN	OUT	TOTAL	IN	OUT	TOTAL
Multifamily Housing (Mid-Rise)	221	Dense Multi-Use Urban	Units	4	0.02	0.18	0.20	0.13	0.05	0.18

Table 2.4 summarizes the proposed trip generation rates for each component of the development.

Table 2.4: Vehicle Trip Generation Rate Summary

FACILITY TYPE	TRIP RATE CATEGORY	UNITS	AM PEAK HOUR			PM PEAK HOUR		
			IN	OUT	TOTAL	IN	OUT	TOTAL
Long Term Care	Assisted Living / Long Term Care	Beds	0.12	0.07	0.19	0.09	0.16	0.25
Assisted Living								
Independent Living / Life Lease	Independent Living / Seniors Housing	Units	0.07	0.13	0.20	0.14	0.12	0.26
Affordable Seniors Rental Housing								
Team Members & Workforce Housing	Multi-Family Housing	Units	0.02	0.18	0.20	0.13	0.05	0.18

Table 2.5 calculates the anticipated trip generation for the site based on the above rates.

Table 2.5: Peak Hour Vehicle Trip Generation

NAME	DENSITY	AM PEAK HOUR			PM PEAK HOUR		
		IN	OUT	TOTAL	IN	OUT	TOTAL
Long Term Care	235 beds	28	16	45	21	38	59
Assisted Living	96 beds	12	7	18	9	15	24
Independent Living / Life Lease	195 units	14	25	39	27	23	51
Affordable Seniors Rental Housing	50 units	4	7	10	7	6	13
Team Members & Workforce Housing	105 units	2	19	21	14	5	19
TOTAL	349 BEDS & 350 UNITS	59	74	133	78	88	165

The proposed development is anticipated to generate approximately 135 vehicle trips during the AM peak period and 165 vehicle trips during the PM peak period. The existing Inglewood Care Centre site was found to generate 50 vehicle trips during the PM peak period, so the additional traffic anticipated from this redevelopment equates to an additional 115 vehicle trips during the busiest hour of the day, or on average fewer than two additional vehicle per minute.

3. BACKGROUND TRAFFIC GROWTH

The roads within the proposed study area road network are Taylor Way & Inglewood Avenue / Burley Drive. Although limited historic traffic count data is available, short counts were conducted by BC MoTI along Taylor Way & Inglewood Avenue in September 2013 and September 2016. Although these traffic counts covered different time periods, both included a counts during the Friday AM peak period. **Table 3.1** calculates the annual background traffic growth rate based on these two data points.

Table 3.1 Historic Taylor Way AM Peak Hour Traffic Volumes

DATE	AM PEAK HOUR	TRAFFIC VOLUME
Friday, September 20, 2013	8:00 AM – 9:00 AM	2,728 vehicles
Friday, September 9, 2016	8:00 AM – 9:00 AM	2,816 vehicles

A traffic growth rate of 1.1% per annum (linear) can be calculated from the daily volumes above. Although this is based on limited data, given the peak period traffic congestion experienced in the area today, this is likely a conservative estimate of the actual traffic growth expected in future years in the area. Given this, a 1.1% per annum (linear) background traffic growth rate is proposed for the overall study area road network.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.

Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.

Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.
