

FIREWORKS SAFETY

Have someone in charge with assistants who know how to follow instructions and who have read and understand these instructions.

1. **NO FIREWORKS**, even sparklers, are to be held in hand when lit.
2. **NEVER** take fireworks apart or modify them in any way.

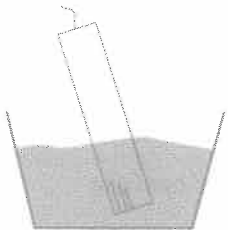

3. Keep fireworks in a **CLOSED BOX**. Remove one at a time and close the lid at once.

4. Do not leave fireworks unattended or close to lighting area.

5. Watch **CHILDREN** carefully.
6. Be familiar with your fireworks before starting the display. Pay particular attention to the location of the wick and proper direction.

7. Control your audience. Keep everyone back at least 60 feet for smaller ground effects, 100 feet for aerial effects.

8. Most fireworks are designed to be planted at least 1/3 in a bucket of soil or sand and tilted slightly away from the audience.

9. **NEVER** lean over a firework when lighting or after an item has been lit.

10. **HIGH WINDS** will affect the quality of your display and may create a hazard. Be sure the firing area has lots of open space.

11. Using a flashlight, ignite each firework at arms length and immediately stand back.

12. If an item does not ignite easily or seems to fizzle, do not handle for 30 minutes.

13. Have a large bucket of **WATER** or a water hose available. Hose down all debris after your display.

14. People lighting the display should wear ear and eye protection. A propane torch provides a constant steady flame for lighting.

15. Please be kind - keep all **PETS SAFELY INDOORS**
